

MALCO FASGROOVE FIBERGLAS DUCT TOOLS

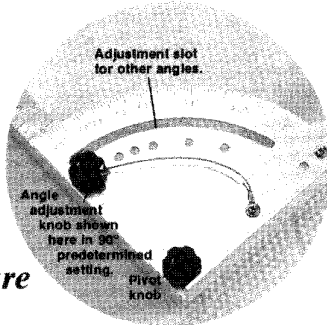

FasGroov™

DEVELOPED WITH THE END USER IN MIND

Molded handles fit angle of grip, reduce arm and hand fatigue.

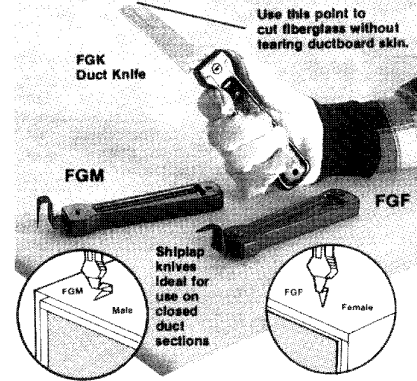

Easy turn-the-knob blade height adjustment compensates for thickness variations in standard 1" board.

FGS Square

Single blade knives:

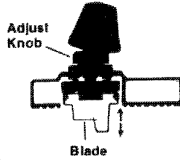

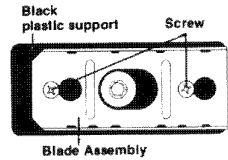

Use this point to cut fiberglass without tearing ductboard skin.

Single blade FasGroov Knives are safer to use and also feature comfortable molded handles. Male and Female Shiplap Knives can be used on closed duct sections. The FasGroov Duct Knife features a rounded scoring point to remove fiberglass from staple flap without tearing skin.

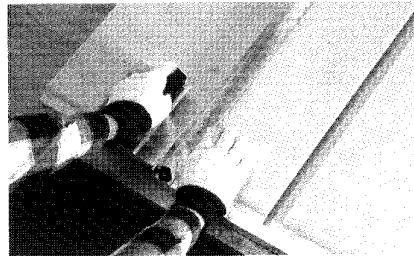

FasGroov Tool identification incorporates both the numbering system of fabrication machines and the traditional hand tool color coding system. FasGroov Tools are available for both shiplap and vee-groove fabrication methods.

U.S. PATENT PENDING

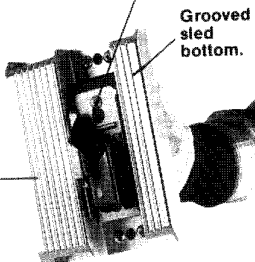

Blades remove without removing screws.

For right or left hand use:

Right hand orientation of kits is easily changed by converting #5 Tool and FasGroov Square for left hand fabrication.

Extruded, anodized, aluminum body is durable and lightweight. Grooved surface on sled bottom facilitates easy sliding.

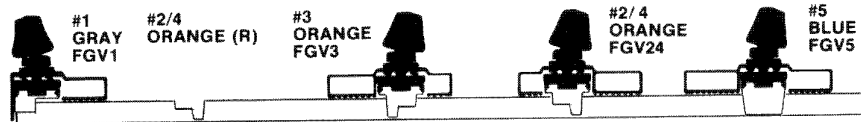

FasGroov Kits

SHIPLAP KIT #FGSLK

Kit consists of the following:
